Requirements for Genealogy App

1. Summary

- a. The genealogy app begins by reading a provided genealogy document, and then creating a family tree based on this data. Once the family tree has been created, it should provide a number of quality of life features to help the user read and navigate the tree, such as the ability to search for members of the tree or add new members.
- b. We want to create an app that clearly and easily keeps track of relationships between people and family genealogies or family trees, providing ancestors and descendants of the person searched for.

2. Scope/Demographic

- a. As far as scope, we are trying to be conscious of requirements creep and not let it get too out of hand. Our three main functions are the read in file, the search function, and the addition of new family members to the database.

3. Searching
